recursion - how to do it

- How can you solve the problem using the sol. of a "simpler" instance of the problem?
- Can you be sure to have a "simplest" input? (if so, include separate treatment of this case.)
- Can you be sure to reach the "simplest" input?

- steps
1. identify the basic case
 2. Assume you can solve the smaller problem
 3. reduce and recurse.
